

## PROGRAM:

```
void setup() {  
  pinMode(13, OUTPUT);  
}  
  
void loop() {  
  digitalWrite(13, HIGH);  
  delay(2000);  
  digitalWrite(13, LOW);  
  delay(2000);  
}
```

## OUTPUT:

**Conclusion:** Basics of Arduino programming were understood successfully with the implementation of blinking LED light using Arduino microcontroller.
